

Mobile WiMAX™ Certification Testing - Protocol Conformance Testing Practical Sessions

Course taught by AT4 wireless

This 2.5 day course provides an in-depth review of the WiMAX MAC layer and PCT documents and test specifications, including testing requirements, TSS and TPS, and ATS documents. Additionally, the course presents methodology for Quality Assurance during certification testing and provides students with an understanding of PCT setup.

Students will also experience hands-on execution of relevant PCT test cases using real WiMAX devices. In this practical session, relevant test cases will be analyzed and executed using real WiMAX products, WiMAX Forum validated Protocol Conformance Testers and the official testing procedures. Students will learn about pre-requisites, testing procedures, issuing testing verdicts, detailed traces, and logs analysis.

After this training, students will have a clear understanding of the MAC layer testing, test specifications, and test setups, procedures, and verdicts for the WiMAX Forum® Mobile WiMAX certification process (802.16e-2005).

This course is designed for SW Development Managers and Engineers at WiMAX vendors; HW Development Managers; Certification Engineers; and Operators seeking information on WiMAX Certification testing. This class is only offered for reduced size groups (max 5 people) at AT4 wireless facilities in Herndon, VA, USA and Malaga, Spain.
