

Scarlet - Cisco

On the sunny Caribbean islands of Curacao and St. Maarten, Mobile WiMAX service, like the sun, streams from cloudless skies. WiMAX service provider Scarlet provides international calling services and high-speed Internet services to corporate and residential customers. Scarlet's international concession covering the entire Netherlands Antilles dates back to 1886 when telegraph was first introduced to the islands. Today, Scarlet operates state-of-the-art wireless broadband networks in Curacao and St. Maarten using its international fiber optic network to provide quality data and voice (VoIP) services.

Scarlet's international calling service offerings provide a variety of choices to suit almost any customer requirement, including a full suite of prepaid and postpaid service packages.

The tourist industry is a major part of the economy of the Nederland Antilles, and fishing boat operators and other mobile entrepreneurs appreciate the mobility and convenience, as well as reasonable prices and simple installation of Cisco's Mobile WiMAX solution.

Scarlet has offered high-speed Internet access over licensed wireless networks interconnected to the international fiber-optic network since 2001 and is the most experienced residential broadband provider in the Netherlands Antilles.

Scarlet is currently the largest wireless Internet service provider in Curacao, led by its flagship Scarlet One broadband service which features portability and easy installation not requiring phone lines. Scarlet launched mobile wireless broadband service using pre-WiMAX technology, and successfully converted its commercially deployed and in-service network to Mobile WiMAX in 2008.

Scarlet's EZ Talk brand calling cards provide economical voice calling (using VoIP) without compromising quality. Specially rated cards for Latin America, Holland, India, and China are used extensively by Curacao's diverse ethnic population.
